

Automated Metadata Tagging

# Optimize SharePoint Search

## Automated Solution to Improve SharePoint Search Experience (Office 365 & On-Premises)

**The new CoreTag solution from CoreView can automate the creation and assignment of metadata for documents stored in SharePoint libraries.** Using configurable content scanning with Natural Language Processing (NLP), the CoreTag solution discovers the information inside your documents no matter where they are stored. Using that information, CoreTag builds and maintains taxonomies unique to your business and automatically applies them as metadata to your documents and scanned images.

Accurate SharePoint search requires metadata to improve the index processing. Without additional metadata describing the true nature of the content inside your documents, the SharePoint search results are much less effective.

### Simplify Content Management with Taxonomy Mapping

CoreTag is a unique solution that uses artificial intelligence to automate the once challenging area of creating taxonomies and adding metadata to documents.

Using CoreTag, organizations can have metadata applied to documents automatically when they are uploaded to SharePoint. This reduces the burden on end-users to enter metadata manually and dramatically improves the accuracy of search results for content stored in SharePoint.

### Automated Document Analysis Solution to Apply Accurate Metadata Tagging for SharePoint Content

Taxonomy Mapping

Ensure Security Compliance

Metadata Tagging

Optimize Search Experience

## Solution Benefits

### SMARTER CONTENT MIGRATIONS

- Understand what information is inside your legacy documents before migration
- Improve information architecture prior to migration to SharePoint online
- Filter, sort and organize your content as it is migrated

### IMPROVED SEARCH RESULT ACCURACY

- Include metadata within search index to improve results
- Build search driven applications, scorecards and dashboards
- Provide refinable search results to help users discover information

### ENHANCED SECURITY COMPLIANCE

- Automatically discover PII / GDPR data
- Trainable to discover any data type
- Recognizes hundreds of types of sensitive information

### TRIAL OFFERING

- Perform a managed trial with a content management expert for 1,000 documents.
- Understand your information taxonomy mapping across all content repositories.
