Background Information

This is the third term of a License Dashboard Chest Agreement, the community having expressed an interest for Eduserv to negotiate an Agreement for License Dashboard products.

Product Information

Supplier Details

Owner: License Dashboard Ltd, (company no 6599902), Blenheim House, York Road, Pocklington, York, YO42 1NS

Product Description

By purchasing License Manager through the Chest Agreement you will receive License Manager, ScanWin Discovery and License Dashboard Portal (for 2 named users). All software applications are based on a subscription license model for 12

months with support (see **Service and Support** tab).

LICENSE MANAGER

From the seamless and automatic import of Microsoft Licensing Statements (MLS), to bulk data uploads from reseller records, to the wizard-based entry of individual licenses, License Manager is designed to make the process of building an accurate and reliable license repository as painless as possible.

- **Connect to 70+ Inventory Tools:** License Dashboard has developed a range of out-of-the-box connectors designed to integrate your existing audit solution into License Manager. There's no faster way to start managing your software licenses.
- **Manage Software Licenses Automatically:** License Manager automatically scours entitlement sources (such as the MLS) ensuring all items are checked against manufacturers' software catalogues and that special licensing terms, such as upgrades and maintenance, are associated with the necessary base licenses. Likewise, any additional or improved installation granted by grandfathering rights or tech guarantees.
- **Automatic Collation and Comprehension of Licensing Entitlements:** License Manager needs just a few minutes to achieve what would take consultants and previous-generation license management solutions weeks, if not months. 15 years of built up software dictionaries have enabled License Manager to hold all historic software records.
- **Leading Data Center and Virtual Environment Visualization:** License Manager's dedicated workspace creates a single pane of glass for managing both physical and virtual relationships. This provides an easy to understand visual of guest host clusters and Data Center relationships, as well as the impact of any mobility granted and the understanding of any affinity and anti-affinity rules.
- **Understand and Assign User Based Licensing:** Now is the time to prepare for your vendor offering user-based subscription licensing schemes. License Manager will help you understand who is assigned to which subscription and will reveal their exact entitlement to deploy across endpoints, automatically resolving multiple user subscription aliases to a primary user account.
- **Advanced Platform Management:** Included in the standard edition of License Manager is the ability to manage complicated vendors such as IBM, Oracle and SAP. With their own workspaces, aligning the complicated licensing rules with consumption data has never been easier.
- **Insight into Cloud Consumption:** Currently, customers struggle to define their cloud, on-premise and hybrid license entitlements. Working with License Manager, you can produce a clear definition between each license type and make strong recommendations for predicted spend.

DISCOVERY: SCANWIN

LD ScanWin is a utility that can be used to inventory Windows devices without the need to deploy an agent. As a console application, it can be run from the command prompt, or scripted for automation.

LD ScanWin collects the following information from Windows devices:

- Device hardware and configuration information
- Windows Operating system edition
- Installed software (MSI Installs)
- Microsoft SQL Server instances and editions
- Single device – provide the device name when running the utility
- List of devices – provide a text file containing a list of device names
- Active Directory – retrieve device and user name information

LICENSE DASHBOARD PORTAL

(Please note, License Dashboard Portal is not included for bands E & F but can be purchased separately)

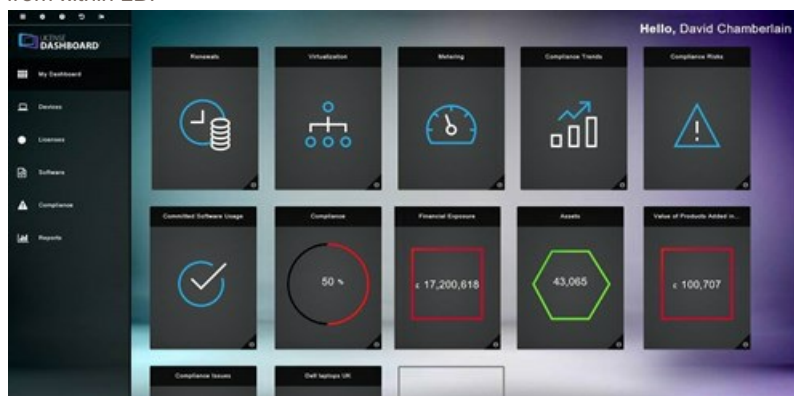

License Dashboard Portal helps organizations share software usage monitoring information in an intuitive BI application across business departments. You can now optimize the value of data collated and held across the different products within the License Dashboard technology platform. Furthermore, License Dashboard Portal makes your data accessible and meaningful to any business unit / department involved in the SAM process.

License Dashboard Portal will provide the ability to report on the key data relating to the License Inventory. The intuitive reporting platform provides a 'Notification' dashboard. The License Records Notifications show an overview of the License Records workspace in License Manager.

License Dashboard Portal has Role Specific Views, example as CEO you require the headline figures of your organization's financial exposure and license compliance risk available to you in a quick to digest format, whenever you need. Traditional SAM reports via a spreadsheet can be cumbersome and require time-spent by the IT team to produce. License Dashboard Portal changes all of that.

Your customized dashboard view takes information directly from your License Manager SAM tool and presents a clear, point in time, overview of your organization's licensing status. No more spreadsheets, no more wordy explanations.

- License Dashboard Portal is available to you 24/7 via your workstation, tablet or smartphone
- Monitor your Azure Cloud applications within LDP, Report Azure platform consumption
- Manipulate data views and save filtered/customized reports
- Visually see monthly trends/consumption analysis
- See complex cloud usage in a single, unified visual view
- View all your applications in one centralized view
- View all users and the user accounts assigned to each user
- Export consumption reports from within LDP

License Dashboard Portal allows businesses to tailor role specific views to end users within the business. 2 named users are provided dependant on tiering, if additional users are required users can be purchased. Allowing additional resources to see the data held within the portal.

ENTITLEMENT IMPORT FOR TOP 5 VENDORS

License Dashboard will take away the task of getting procurement data for 5 publishers into License Manager. License Dashboard consultants cleanse and import and validate the entitlement into License Manager enabling you to start using the tool from the beginning. License Dashboard match the maintenance purchases to the licenses to give a cleansed normalised view of your entitlement position for 5 vendors. All the data is then imported directly into License Manager.

INSTALLATION AND CONFIGURATION

License Dashboard consultants will undertake the installation ScanWin, License Manager and LDP within your infrastructure, License Dashboard will configure and schedule connectors to feed data on a chosen frequency into License Manager. License Dashboard Users will be registered to the portal and training and handovers will be provided to show you how to manage named users and connectors within the solution.

2-DAY USER TRAINING

OVERVIEW: This course is designed to provide attendees with the in-depth knowledge required to use License Dashboard License Manager.

- 2-day instructor-led, classroom training
- 50% lecture, 50% hands-on lab

COURSE OBJECTIVES: At the end of the course, you will understand the functionality of License Manager and be able to:

- Understand the basic characteristics of software licenses
- Administrate Users & Dictionaries
- Maintain and update the License & Contract Records
- Aggregate your license entitlement using the License Register
- import Software usage and allocate associated entitlement
